MOBILE WEB APP

Target Release	1.0
Document status	On Sprint 1
Document owner	Kayla Garza
Designer	Kayla Huerta
Developers	Kayla Garza, Kayla Huerta, Jacob Garza, Joanna Gutierrez
Q&A contact	Kayla Garza, Kayla Huerta, Jacob Garza, Joanna Gutierrez

| Project Background |
|---|
| The desktop application we're making is a to-do list. Some functions that the user can do is the ability to create, read, update, and delete from the list. |

Requirements

#	User Story Title	User Story Description	Priority	Notes
1	User Creating Record	As a user, I am able to record data in the to-do list application. The data I'm able to record is my name, the due date, the description of the task, the status of the task, and my group members.	2nd	Finished 3/12/2025
2	User Task Reading	As a user of the app, I want to see the tasks listed so I have an idea of what I should do.	1st	Finished 3/12/2025
3	User Task Updating	As a user, I want to be able to modify my to-do list, so that I can note new developments or make needed changes.	4th	Finished 3/13/2025
4	User Task Deletion	As a user, I want to be able to delete tasks, so I can clear completed tasks and have a better idea of what tasks I have left to do.	3rd	Finished 3/13/2025
5	User Assigning Task	As admin, I want to assign tasks in the to-do list to other users. Only admins are allowed to assign tasks.	5th	Pending

6	User Assigned Task	As a user, I am able to see which task I've been assigned by admin. I can only view the task given.	6th	Pending

Diagram flow for user interaction

Here you can add Diagram flows for the user interactions.

Questions

Below is a list of questions to be addressed as a result of reviewing this design document

Question	Outcome
User View	Somehow we will make it so that certain users will have limited access when viewing the To-Do List, hopefully when we get to the webpage part.

Due Date Timer	If there is time, we can probably add it so that the user assigned a task will be notified when the due date is up.
Design	Also near the end we can modify the To-Do List application to make it more appealing instead of cluttered and simple.
Functions	When the user is admin, maybe we can add a list of what they can do near the bottom corner of their screen.

Sprints

Sprint number	Activities	Comments (issues, changes, etc)
1	Working on a technical design document, majority of user stories completed, flow chart diagram completed, questions asked and answered.	Issues were brought up in the code with the variable group, which was changed to group_mem because it was an already existing variable in python. Also minor indentation errors also due to how python works.
